HOW TO SEND MONEY—Remittances should be made by postoffice money order, express money order, drafts or checks. Where it is not possible to obtain these, the letter should be registered. In all cases where the order for seed amounts to one dollar or more, the cost of postoffice or express money order, or cost of registering the letters from places that are not money order offices, may be deducted from the amount of the order.

STAMPS—We will accept stamps in good condition (one or two-cent stamps preferred) the same as cash, but we ask those remitting stamps to wrap them in oiled paper, if possible, to prevent their sticking together or to the order.

PRICES SUBJECT TO CHANGE—This catalog is printed in November and the market on many items of garden and field seeds has not yet been established. Consequently prices on those items indicate value at the time these pages are printed. Orders will be filled, if at all possible—at prices printed in this book, but ALL PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

Non-Warranty—In accordance with the universal custom of the seed trade, Job P. Wyatt & Sons Co., gives no warranty, express or implied, as to description, quality, productiveness or any other matter, of seeds, bulbs or plants it sends out, and will not be in any way responsible for the crop. If the purchaser does not accept the goods on these

terms they are at once to be returned. This does not mean that we lack confidence in the seeds we sell, but we have no control over the seeds after they leave our possession, especially as to methods of planting, cultivating and fertilizing, all of which are important factors in the success of any crop. Crops are dependent for success or failure on so many things besides seed that it is impossible for us to give any warranty or guarantee. If we should warrant or guarantee seeds in any way, we could be held responsible for failure of the crop, regardless of cause, and this is a responsibility we cannot and will not accept. NO RESPONSIBLE SEEDSMAN GIVES ANY WARRANTY.

VEGETABLE PLANTING CALENDAR

This planting Calendar is prepared so it's easy to follow and we suggest you use it as it will be found very valuable when planting your garden. Of course planting time varies depending on your location and remember this calendar is based on Raleigh and further south so naturally for further north planting time would be later. If you live north of Raleigh your planting would be one week to one month later. New York latitude would average one month later. Depth of planting may be slightly varied with soil density—this is, on light sandy soils seeds or bulbs are planted deeper than on heavy or clay soils.

Let Wyatt's assist you with your garden problems and we will be glad for you to call on us for any particular information you may need regarding planting.

WYATT'S BUSH SNAP BEANS BUSH OR BUNCH GREEN PODDED BEANS

Culture—Beans are sensitive to both cold and wet, so do not plant till the ground is warm. To have a continuous supply plant every two weeks till the middle of August; further South they may be planted even later. Make the rows 2 to 3 feet apart, drop the beans 3 inches apart and cover 1½ to 2 inches deep. Give frequent but shallow cultivation up to blossoming time, not afterward, and never when the plants are wet. Plant in a light loamy soil that warms up quickly. One pound plants 60 feet; 75 lbs. will plant an acre. Wyatt's Garden Beans are produced from the finest stock seed and are grown in the mountain states of the West. They are disease-free.

CABBAGE SEED

CULTURE—If the plants are started in a seed-bed, they should not be crowded or they will run up weak and slender and will not endure transplanting well. When 4 to 6 inches high, transplant to open field, setting the plants as deep as the first leaf stems; give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed. Be sure to plant the best seed from Wyatt's.

No. 151—Early Jersey Wakefield—A very popular variety with both at home and market gardeners. It is the earliest of all varieties and is planted by the large growers for shipment to northern markets. The heads are pointed, of medium size, uniform and with few outer leaves. The quality is excellent. The universal popularity demands that more than ordinary attention be given to the selection of plants for breeding purposes, having in mind earliness, sureness to head, solidity and uniformity of growth and maturity. In Wyatt's Early Jersey Wakefield this careful selection has been critical and continued through many years and we are confident no finer stock can be obtained at any price. Every year we sell thousands of pounds of this variety. Plant Wyatt's strain and avoid disappointment. Prices: Pkt. 10c; oz. 20c; ¼ lb. 50c; lb. \$1.75; 5 lbs. \$7.00; 10 lbs. \$12.50, postpaid.

CARROTS ARE VERY NUTRITIOUS

One ounce of seed for 100 feet of drill, 3 to 4 pounds for an acre.

For several generations the carrot has been one of the common garden vegetables but only in recent years has it come to be recognized as one of our most nutritious and wholesome foods. Health authorities assert that carrots contain in high degree those elements which constitute a nourishing article of diet. The plant has no serious insect enemies and is rarely subject to disease. The culture of carrots is easy, being practically the same as that of beets. When practicable it is best to plant them in soil that has been richly fertilized the previous season. Freshly manured soil will often produce divided roots. Plant the seed $\frac{1}{2}$ inch deep in loose, well prepared soil, making rows 16 to 24 inches apart. Cultivate as soon as the plants are well established and thin to 2 to 4 inches in the row, according to the size of the variety. Plantings may be made from Early spring until mid-June and again in the early fall.

CULTURE—Cauliflower will do well in any land that is suitable for cabbage, and in general the same cultural directions apply as for cabbage. Plenty of moisture is necessary for their development, especially at heading time. Sow seed in hotbed in November, transplant into cold frame for protection during the winter, and set out in the fields early in April, in rows 2 to $2\frac{1}{2}$ feet apart, and 18 to 24 inches apart in the row. For late crop, sow seed about the 15th of April, transplanting when plants are large enough. Cultivate like cabbage. KALE OR BORECOLE

Extra Dwarf Blue Curled Scotch Kale No. 342

CULTURE—1 ounce of either Green Curled or Spring Kale or 2 ounces of Scotch are sufficient for 100 feet of drill. For an acre, 1½ pounds of either Green Curled or Spring, and from 3 to 7 pounds of the Scotch. Scotch Kale being particularly subject to the attacks of insects, both before and after coming up, it is necessary to sow it very thickly. Scotch Kale should be sown from the first to the last of August, and the Green Curled from the middle of August until the first of October. Spring Kale is sown nearly all the year round, either in drills or broadcast, and should be sown at intervals of 10 days in order to always have it tender. Sow ½ inch deep in rows 2½ feet apart, allowing from 6 to 10 inches between the plants, and cultivate as cabbage. Kale, being a very strong feeder, heavy manuring is necessary to make a good crop.

No. 342—Extra Dwarf Blue Curled Scotch—

The plants of this splendid Kale grow low and compact and of a spreading habit. The leaves are far more attractive than the regular green curled Kale as the color is a dark bluish-green. The leaves are beautifully curled and will stand for a long time before turning yellow. We can highly recommend Wyatt's strain of this variety as it always brings the top price at market. EGG PLANT

CULTURE—One of the most delicious vegetables grown, yet it is not cultivated to the extent it would be if its superior qualities were better known. Seed germinates slowly and should be started in hot-beds. When plants have two rough leaves transplant 3 to 4 inches apart. When the weather is sufficiently warm, set plants in open ground, allowing 3 feet space between rows, and 2½ feet space between the plants in the row. Hoe frequently, keeping the soil loose and fine. Earlier plantings may be made in open ground if protected by Hotkaps. One ounce will produce 1,000 plants; ¼ lb. will sow an acre.

No. 314—Black Beauty—

The earliest and best of all large-fruited Eggplants. It is valuable alike to the private planter and the extensive grower for market. Black Beauty produces fruits fully as large and ready for use ten days to two weeks earlier than the New York Purple. The plants branch very freely near the ground and grow in well rounded bushes. The grand, large fruits are thick, of most attractive form. The skin is a rich lustrous purplish black—the satin gloss and rich coloring adding greatly to its beauty. The intensely brilliant coloring is uniform over the whole fruit and does not fade or change to a lighter color. Prices: Pkt. 10c; ½ oz. 25c; oz. 45c; ¼ lb. \$1.40; lb. \$4.50; 5 lbs. \$20.00, postpaid.

CULTURE—Lettuce is easy to grow, but requires rich, moist soil, clean and thorough cultivation and plenty of water to give it that quick growth on which depends its tenderness and flavor. CULTURE—The Melon delights in warm rich soil with perfect drainage, and they can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig holes 2 feet square, filling them with a rich compost of wood-mould and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about 10 seeds to the hill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a hill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

GROW WATERMELONS FOR HOME OR MARKET

Wyatt's Stone Mountain Watermelon No. 461

No. 446 — Wyatt's Wondermelon —

The New Wondermelon has gained in popularity in recent years and is now planted by many of the large melon growers in the South. It is a white-seeded melon, grows uniformly large and long, resembles the Tom Watson, but is thicker, more solid and usually larger and heavier. Melons weighing 40 to 50 pounds are not unusual and many prize winning weights have been reported. Every bit of the brilliant red flesh of this melon is sweet to the rind; it is free of cores or hard centers and the rind is thin, yet sufficiently tough to stand ordinary handling. The melon is a dark glossy green with small crease like markings on the larger sizes, a most attractive product for market display. We can strongly recommend this melon but advise intending planters to be sure and get the true stock direct from Wyatt's. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c; 5 lbs. \$4.00; 10 lbs. \$7.00; 25 lbs. \$15.00, postpaid.

No. 461 — Wyatt's Stone Mountain —

A beautiful large round melon gaining in popularity each year. Stone Mountain is the sweetest of all watermelons and is almost round in shape. Its deep dark green color and rich scarlet flesh make it a ready seller. It weighs 50 to 80 lbs. and always brings the highest price at local and nearby markets, but we do not recommend it for long distance shipping. It is remarkable for the few seeds it contains and its unusually solid, good, rich meat. Stone Mountain is very prolific, a splendid drought resister. Our stock of this variety is extra selected and true to name. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 90c; 5 lbs. \$4.00; 10 lbs. \$7.00; 25 lbs. \$15.00, postpaid.

No. 456 — Improved Tom Watson —

A very handsome, large fruit, frequently 2 feet long and 12 inches in diameter. The dark green rind is a contrast to the bright scarlet flesh, which is of splendid texture and flavor. Prices: Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c; 5 lbs. \$3.00, postpaid.

Culture—Prepare hills 8 to 10 feet apart each way, by thoroughly working into the soil an abundance of well rotted manure. When the ground is warm, plant six to eight seeds to the hill, covering 1 inch. When plants form first leaves, thin to three plants to the hill. One ounce will plant about 50 hills; 3 to 4 lbs. to the acre. Earlier plantings can be accomplished by protecting with Hotcaps.

No. 441 — Wyatt's Black Gypsy—A Wyatt introduction and one of the finest Watermelons for home garden or market. The vines of this Melon are very vigorous and prolific, setting a goodly number of fruit to each hill. These Melons, which are oblong in shape, show a faint stripe when small, but this gradually disappears as the melons reach maturity. At this stage they resemble a Halbert's Honey in color, but are very much larger, often weighing 50 lbs. The flesh, which is very highly colored, is absolutely free from stringiness or white hearts and is very delicious. The rind is very thin and quite tough. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. \$1.00; 5 lbs. \$4.50; 10 lbs. \$8.00, postpaid.

No. 443 — Schochler—Of recent introduction, the Schochler is really a remarkable melon. It grows to an immense size, single specimens weighing as high as 80 lbs. and carloads averaging 50 lbs. each. Schochler is a rich green melon with dark red meat, fine grained, no white parts and delicious flavor. It is not a very prolific sort and usually produces 3 or 4 melons to the vine. The rind is medium thick but strong and withstands shipping. Prices: Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 85c; 5 lbs. \$3.50; 10 lbs. \$6.00, postpaid.

No. 449 — New Radio—It measures 26 to 28 inches in length, is dark green outside striped lighter green. The rind is medium thick and the meat is a bright red, very sweet. It is entirely free from hard centers and a good long distance shipping variety. New Radio melons average 40 lbs. each. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. \$1.00; 5 lbs. \$4.00, postpaid.

No. 451 — Thurmond Gray—A great shipper. It is a handsome melon of large, oblong shape. The flesh is bright red, solid, firm, of melting flavor. The vine is a remarkably strong, vigorous grower and a heavy bearer of large, silvery-gray melons with very tough, thin rind. The melons measure from 20 to 30 inches in length. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 85c; 5 lbs. \$3.50, postpaid.

No. 450 — Irish Gray—It is sweet, the flesh is red, crisp and free from stringiness. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 85c; 5 lbs. \$3.50, postpaid.

No. 448 — Halbert's Honey—A very early melon of medium size, oblong in shape, handsome dark green in color with a rich, crimson flesh of exquisite flavor. The rind is just a little too thin to stand distant shipping or too much handling. Prices: Pkt. 5c; oz. 10c; ¼ lb. 30c; lb. 85c; 5 lbs. \$3.50, postpaid.

No. 455 — Georgia Rattlesnake—The rind is mottled, the flesh is dark red and it is sweet and good. It is an attractive melon. Prices: Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c; 5 lbs. \$3.00, postpaid.

WYATT'S PEPPER SEED

Wyatt's World Beater Pepper No. 601

CULTURE—Sow the seed in hotbed or a window box at a temperature of about 70 degrees on or about February 15. Transplant to the open ground when all danger of frost is over, in rows 3 to 5 feet apart and plants set 15 to 20 inches apart in the row—about 9,000 plants are required to set an acre. Cultivate frequently and keep free from weeds. A mixture of sheep manure and chicken manure is most desirable for distributing in the rows a week or ten days before the plant is set out. When the plants are well set and started at about 7 inches high, guano or any well-rotted manure, hoed into the surface soil will also increase plant growth and fruiting qualities. We are large growers of Pepper seed. Can supply large orders. The seed is grown from well selected and transplanted plants which show purity and excellent quality. All our Pepper seed are true American grown—we have no cheap mill or imported stocks to offer.

No. 601 — Wyatt's World-Beater—

The name of this Pepper gives you an idea of how good it really is. It is a new introduction, combining the long form and earliness of the Ruby King and the large size of the Chinese Giant. It is exceedingly productive, a good shipper, and one of the most attractive Peppers on the market. The peppers are 4-lobed, 5 inches long and 3½ inches in diameter. Its color is first a dark green, changing to a very brilliant scarlet when ripe. It is not unusual to pick 15 to 25 fine Peppers from a single plant. Because of its thick flesh it makes an excellent shipper and we want all of our customers to try at least a small quantity of it this season. Prices: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. 90c; lb. \$3.00; 5 lbs. \$12.50, postpaid.

No. 596—Wyatt's Royal King

A truly superb sweet pepper for both market and home garden. The fruits are 4 to 4½ inches long, of deep green color when young, bright scarlet red when ripe. Prices: Pkt. 10c; ½ oz. 20c; oz. 35c; ¼ lb. \$1.00; lb. \$3.50; 5 lbs. \$15.00, postpaid.

No. 592—Wyatt's California Wonder—

Here's a new Pepper of real merit. It's nearly as large as, and earlier than Chinese Giant, but is blocky or square-ended, just the shape you've been looking for. It will sit upright and is ideal to stuff and bake, or to serve whole with salad. Its walls are exceptionally thick, heavier and firmer than any other sort, and the flesh is deliciously sweet and spicy, with no bite to it. Some specimens in our trials measured 4½ inches across and 5 inches long, and weighed 1½ pounds. The bright, attractive green changes to a brilliant light crimson. Prices: Pkt. 10c; ½ oz. 25c; oz. 45c; ¼ lb. \$1.25; lb. \$4.50; 5 lbs. \$20.00, postpaid.

No. 593—Bell or Bull Nose—

The plants are very vigorous and sturdy. The fruits are about 3 inches long, 2 inches in diameter and blunt-ended. Very productive. Prices: Pkt. 10c; oz. 30c; ¼ lb. 85c; lb. \$3.00; 5 lbs. \$12.50, postpaid.

No. 591 — Chinese Giant—

Sow very thickly from March to August ¼ of an inch deep in drills 18 inches apart in deep, rich, sandy loam, which has been well manured for a previous crop. When the plants are 2 to 3 inches high, thin out from 4 to 6 inches apart and cultivate frequently to keep down weeds. SQUASH ARE EASY TO GROW

One ounce of the bush varieties to 40 hills; 2 to 3 lbs. to the acre.

One ounce of the large-seeded varieties to 15 hills; 3 to 4 lbs. per acre.

CULTURE—Squashes should not be planted until danger of frost is past and the ground has become warm, but plant the Winter kinds as soon as safe in order that they mature. Plant in hills 5 feet apart for bush varieties, and 6 to 8 feet apart for running varieties, putting 6 to 8 seeds to the hill, finally leaving but 3 plants. A rich, warm, mellow soil is conducive to high yields and early maturity, but Squashes grow quite well in almost any well drained soil. It pays to enrich each hill with rotted manure or commercial fertilizer. During the early stages of growth keep the plants well sprinkled with "Slug Shot" or Tobacco Dust, to save them from insects. The Winter Squashes may be grown in cornfields in the same manner as pumpkins. In the small garden, Squash may follow early beets, early cabbage, corn salad and spinach.

Wyatt's Flower Seeds are extra select and are produced for us by expert growers in this country and Europe, no finer seeds can be had. Our valuable Planting Calendar on page 26 will greatly assist flower growers in making a suitable selection. Please refer to pages 39 and 40 for a complete list of Wyatt's Perennial Flower Seeds. CALENDULA—Make Wonderful Cut Flowers

One of the best and showiest free-flowering hardy annuals, growing well in any garden soil. They make fine cut-flowers; attractive beds and borders and bloom profusely until frost. In grandmother's garden, they were familiarly known by the old-fashioned name of Pot Marigold.

Although the old-fashioned Calendulas were highly prized for their ease of culture and extremely free blooming qualities, the flowers were small and single, and could in no way be compared to the wonderful double varieties of today. The Calendula thrives almost anywhere, it is equally as much at home in poor sandy soil as in heavy soil. For the gardener with limited garden space, there is no annual that can be more effective, as it blooms profusely all during the summer into late fall, thereby producing an uninterrupted supply of flowers for table decoration. (See illustration.)

GIANT PETUNIAS

Petunias are very showy annual flowers and bloom continuously all summer. For garden beds, window or porch boxes, these beautiful flowers have no equal. The petunia seed we offer is grown by an expert grower in California especially for us.

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting.

PERENNIAL FLOWER SEEDS

Grow Your Own Hardy Flowers From Seed

Everybody wants Perennials—and wants them in generous measure to secure the desired effects in color and charm. If you delay and finally buy plants, the cost mounts high; an attractive perennial border may require several hundred dollars worth of plants. Exactly the same results can be secured with \$3.00 or \$4.00 worth of seeds! Aside from the money saved it is very fascinating to grow your own plants from seed.

WYATT'S "WONDERLAWN" LAWN GRASS

View of Fairway and Greens on the beautiful Carolina Pines Golf Course, Raleigh, North Carolina.
Wyatt's Grass Seeds used exclusively

WYATT'S "WONDERLAWN" LAWN GRASS

You will find something different in this Wyatt's "Wonderlawn" Lawn Grass and as the name implies it will produce a wonderful lawn and give entire satisfaction in the Southern States. It is a properly blended mixture of grasses adapted to our southern soil and climate and only contains grasses that we have found after years of scientific experiments to be the best for the South. Do it differently this year! Instead of buying "grab bag" lawn seed, why not select the right seed for your section and conditions. All the grasses used in this "Wonderlawn" mixture are field ripened, sun cured and double processed. By double processed we mean that all the weed seeds, chaff, dirt and other impurities have been removed. You will be delighted with this new mixture and you can enjoy that perfect Velvety Green Lawn that you have always longed for.

PRICES: WYATT'S "WONDERLAWN" LAWN GRASS. 1/2 lb. 20c; 1 lb. 40c; 5 lbs. \$1.75; 10 lbs. \$3.00; 25 lbs. \$6.75; 100 lbs. or over at 25c lb. Postage or freight prepaid.

HOW TO MAKE A LAWN

Harrow or rake the surface to the finest possible condition and roll until all elevations and depressions have been removed. Rake the seeds in lightly, following with a roller, a firmly rolled surface being absolutely necessary; small areas may readily be packed firm by the back of a spade. In the South we often have trouble getting good lawns because it has been found that no one grass will give satisfactory results at all seasons and on all soils. By careful experiments we have succeeded in getting a combination of grasses that will produce an evergreen lawn, giving permanency and beauty of sward. By the use of Wyatt's "Wonderlawn" Lawn Grass Seed a rich, velvety lawn can be made and maintained. One pound will sow a space 10 by 20 feet or 200 square feet; 75 to 90 pounds to an acre.

SHADY NOOK LAWN GRASS

For shady places under trees you will find our Shady Nook Lawn Grass very satisfactory. In order to have a good lawn in damp and especially shady spots, a frequent application of agricultural lime is advised to prevent the soil from becoming sour. FIELD AND FARM SEEDS

RECLEANED CLOVER SEED

No. F97—Alfalfa or Lucerne Clover—

We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99% or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground, the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1½ tons of finely ground lime to the acre after plowing, and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 30 to 40 lbs. to the acre. Prices: ¼ lb. 10c; 1 lb. 30c; 5 lbs. \$1.25; 10 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. or over 18c lb.; 25 lbs. or over 17c lb.; 100 lbs. or over 16c per lb.

The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 lbs. per acre. Prices: ¼ lb. 10c; 1 lb. 20c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. or over 10c lb.; 25 lbs. or over at 9c lb.; 100 lbs. or over at 7c lb.

No. F94—Tennessee 76 Lespedeza—

Is a selection of common. It differs chiefly from common in that it grows taller and possibly a little later in maturity. The Common and Tennessee 76 seed resemble. Prices: ¼ lb. 10c; 1 lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. or over 22c lb.; 25 lbs. or over 21c lb.; 100 lbs. or over 20c lb.

No. F91—Common Lespedeza or Japan Clover—

It grows on galled hillsides and on all soils, even on the poorest, and being a legume will extract nitrogen from the atmosphere and store it in the roots for later crops. Its abundant long tap roots and laterals, when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter that will increase the yield of succeeding crops. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 lbs. per acre. Prices: 1 lb. 20c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. or over 10c lb.; 25 lbs. or over 9c lb.; 100 lbs. or over 8c lb.

No. F92—Korean Lespedeza—

This popular new Japanese type clover is coming into large demand. Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. When a good crop of Korean Lespedeza is turned under it will double the corn yield in one year. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soybeans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for re-seeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 20 to 25 pounds of seed per acre.

No. F94—Sericea Lespedeza—

This new perennial Lespedeza seed in this group is the Swedish, Linnemost Lespedeza. It makes heavy yield on poor soil, and is a great soil improver, besides being resistant to drought. Sericea Lespedeza offers a great and profitable means to progressive farmers to produce good seed and to seed of the wonder plant that thrives on poor soil, and on which red clover and alfalfa are not palatable. While *Adiantum* requires fertile soil, lime and fertilizer in order to produce a good crop, Sericea Lespedeza is a much cheaper crop and promises to the Southern Farmer more certain results.

Sericea Lespedeza was introduced into this country by Dr. A. J. Pieters of the United States Department of Agriculture. Sericea Lespedeza grows erect with a few to many stems rising from a crown from 3 to 5 feet tall during the first year. From six to thirty or more stems will arise from one crown during the second year, and the plant will grow taller. Additional stems grow each year until a plant five or six years old may have as many as 100 stems. The plant is extremely leafy, leaves holding on to the bottom of the stems. In a dense stand the plant stems are no thicker than a wheat straw, and when cut at the right time the stems are but little more woody than the leaves. The seed crop should be harvested when the bulk of the seed have turned brown. Complete information about Sericea Lespedeza may be obtained by writing the N. C. State Department of Agriculture, Raleigh, N. C.

Sudan Grass No. F73

WYATT'S GRASS SEEDS FOR HAY AND PASTURE

No. F73—Sudan Grass—A wonderful quick growing summer hay crop. As big a yielder as Johnson grass, but it has none of the latter's objectionable features, for Sudan grass can never become a pest, for it is an annual. Its greatest value is for hay, which is well liked by stock. The hay is equal to timothy in feeding value. It is also strongly drought resistant. Sow it after the ground becomes thoroughly warm, either broadcast or in rows two feet apart, and cultivate like corn. When sown in rows it grows six to seven feet high; when sown broadcast it grows four to five feet high. Sudan grass may be profitably grown with cowpeas and soybeans, as being of erect growth it supports the pea vines and makes the cutting easier and allows them to cure more quickly; the mixture will give a better-balanced ration than either fed alone. When grown with cowpeas or soy beans make the sowing of Sudan grass after the peas or beans are planted and covered. Almost any soil, from heavy clay to light sand, will grow Sudan grass. Sow 5 to 6 lbs. to the acre in 2-foot rows; 20 to 25 lbs. broadcast. Prices: Lb. 15c; 5 lbs. 50c, postpaid. Not prepaid, 10 lbs. or more 7c lb.; 25 lbs. or more 5c lb.; 100 lbs. or more 4c lb.

WYATT'S SORGHUM SEED

CULTURE—Plant when the ground becomes thoroughly warm, say two weeks after corn planting, on a rich, well drained clay loam, in rows 3½ to 4 feet apart, and cultivate as you would corn. After the flowering stage is passed, but not earlier, it may be pastured or cut for fodder. Sorghum may be grown with cowpeas and soy beans either in rows or broadcast. Sown alone, 50 lbs. per acre.

No. F194—Wyatt's Sugar Drip Cane—No new sorghum has been brought out that can compare with it in yield of syrup. It makes a large, juicy and succulent growth. It will yield about 65 per cent of the weight of the cane in juice when extracted by a good farm mill; a stronger mill should extract as much as 75 to 80 per cent. Prices: Lb. 20c; 2 lbs. 35c; 5 lbs. 60c, postpaid. Not prepaid, 10 lbs. or more 7c lb.; 25 lbs. or more 5c lb.; 100 lbs. or more 4c lb.

Prices: Lb. 15c; 2 lbs. 25c; 5 lbs. 50c, postpaid. Not prepaid, 10 lbs. or more 7c lb.; 25 lbs. or more 6c lb.; 100 lbs. or more 4c lb.

SORGHUM AND CANE SEED FOR FORAGE

No. F192—Early Amber—One of the earliest sorghums and furnishes a large yield of most nutritious forage which may be fed either green or cured. If planted early it will yield two cuttings a season, stooing out thicker each time it is cut. If grown with cowpeas or soy beans the quality of the hay is improved and a more nearly balanced ration may be had. The proportions recommended are 15 lbs. Early Amber Cane, ½ bushel of soy beans and 1 bushel cowpeas to the acre broadcast. Grows 10 to 12 feet high. Sow broadcast 1 to 1½ bushels to the acre; 5 to 6 lbs. plants an acre in 3½ to 4-foot rows. Prices: Lb. 15c; 5 lbs. 50c, postpaid. SEEDS OF FORAGE AND GRAIN CROPS

No. F292—Egyptian Wheat or Shallu—Sometimes called Chicken Corn. It grows tall, stools out, frequently three or six stalks from a single root. Cut when at the dough stage, and a second cutting may be obtained. When grown for grain, the tops are cut, cured in a dry place and threshed like other grains. For cattle, horses, hogs, and poultry, the grain may be fed either whole or ground. It is of high feeding value, and will take the place of corn. Plant 8 to 10 lbs. to the acre in rows 3½ to 4 feet apart. Prices: Lb. 20c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. or more 12c lb.; 25 lbs. or more 10c lb.; 100 lbs. or more 9c lb.

No. F293—Milo Maize—The plant makes fine feed and ensilage, especially when mixed with soy beans or cowpeas, and the grain is fattening for cattle and poultry. For fodder and ensilage cut when in the dough stage; at this stage it has a feeding value practically equal to corn. It grows on all soils. 6 to 8 lbs. will plant an acre. Prices: Lb. 15c; 2 lbs. 25c; 5 lbs. 50c, postpaid. Not prepaid, 10 lbs. or more 8c lb.; 25c lbs. or more 7c lb.; 100 lbs. or more 5c lb.

No. F289—Teosinte—A single seed producing from thirty to sixty stalks, each 10 to 12 feet high, gives some idea of what an enormous yield may be had from Teosinte—the Louisiana Experiment Station reported a crop of more than 50 tons on an acre. If cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings as large as the first. If sufficient is planted a continuous supply of nutritious green feed can be had daily right up to frost. Plant in May or June in drills 3½ to 4 feet apart; 3 to 4 lbs. plants an acre. Prices: ¼ lb. 20c; 1 lb. 55c; 2 lbs. \$1.00; 5 lbs. \$2.25; 10 lbs. \$4.00, postpaid.

TENNESSEE GOLDEN MILLET

No. F185—Tennessee Golden Millet—

German or Golden Millet makes a quickly grown, easily cured and large yielding, nutritious hay crop. Relished by horses and cattle. Seed thickly, not less than 50 lbs. to the acre, any time from the middle of April until the end of July. It's a quick crop, maturing in six to eight weeks. Cut while in bloom, before the seed hardens in the head. Growing millet with an early variety of cowpeas, like Whippoorwill, is becoming quite popular, 40 lbs. of millet being sown with a bushel of cowpeas. The crop should be cut when the millet is coming into bloom, regardless of the maturity of the cowpeas, for at that stage the feeding value of the millet hay is the highest. Prices: Lb. 15c; 5 lbs. 50c, postpaid. Not prepaid, 10 lbs. or more 4½c lb.; 25 lbs. or more 4c lb.; 100 lbs. or more 3½c lb.

No. F186—Pearl, or Cat-Tail Millet—

One of the best and most nutritious of the continuous cutting green forage plants. Grows 10 to 12 feet high, but cutting can commence when it has attained the height of 3 to 4 feet, when it will stool out enormously and make rapid growth; can be cut in this way three to four times during a season. It does well even on poor land, and surprisingly well in dry seasons. All kinds of stock eat it greedily. Should not be planted until the ground is thoroughly warmed. Sow 6 to 8 lbs. to the acre in rows 3 feet apart. Prices: Lb. 25c; 5 lbs. 85c, postpaid. Not prepaid, 10 lbs. or more 11c lb.; 25 lbs. or more 10c lb.; 100 lbs. or more 9c lb.

Pedigree Fulghum Oats No. F175

No. F175—Wyatt's Pedigree Fulghum Oats

We consider this variety most satisfactory for spring planting. It is a heavy yielder and rust-proof, has plump full heads that mature early. Its productiveness, probably more than any of its other good qualities, has contributed to its wide popularity. They stool out splendidly, have large, full heads, fine, plump grains and strong straw that stands about three feet high. The average yield from Fulghum 12 bushels to the acre more than all other varieties. It has plump grains and exceptional heavy weight. N. C. State Certified. Prices: 4 lbs. (1/2 peck) 30c; 8 lbs. (peck) 50c, postpaid. Not prepaid, peck 25c; bu. 65c; 5 bu. or more 60c per bu.

No. F174—Burt or 90 Day Oats

The Burt is a prime favorite for growing on the light sandy soils of the coast sections of the South Atlantic States, where the results have been uniformly good. The grains somewhat resemble the Red Rust-Proof. It makes a good growth of straw, is an abundant yielder of bright, clean heavy grain, is free from rust, and what is of equal importance when plantings are late, it is of early maturity. Early plantings can be cut in time to put the same land in corn, peanuts, cowpeas, millet or other summer crops. Prices: 4 lbs. (1/2 peck) 30c; 8 lbs. (peck) 50c, postpaid. Not prepaid, peck 25c; bu. 65c; 5 bu. or more 60c per bu.

No. F177—White Swedish Oats

One of the State Experiment Stations reports in a test covering several years an average yield of slightly more than 10 bushels to the acre more than varieties tested, and that the proportion of kernel to the whole grain averaged about 75 per cent. It has given especially good crops on light soils without any tendency to lodge, yet the straw is not large in proportion to the grain, which is large, thick and plump. Prices: 4 lbs. (1/2 peck) 30c; 8 lbs. (peck) 50c; postpaid. Not prepaid, peck 30c; bu. 70c; 5 bu. or more 65c per bu.

No. F176—Gray Winter or Turf Oats

Probably the best reason for the wide popularity of Gray Winter Oats is their extreme hardiness for there is no other oat that will stand such extreme cold. Another good claim for their popularity is their stooing propensity, which accounts in part for the heavy yield. Their strong turving and stooing characteristics give them advantages for grazing purposes. Prices: 4 lbs. (1/2 peck) 30c; 8 lbs. (peck) 50c, postpaid. Not prepaid, peck 30c; bu. 70c; 5 bu. or more 65c per bu.

PLANT PLENTY OF PEANUTS

Any soil that will grow corn or cotton will grow peanuts; on light sandy or loamy soils there are few crops more profitable. Plant 1 1/2 to 2 bushels per acre.

MULCH PAPER

Valuable Booklet, "The Miracle of Mulch Paper," Mailed Free

Mulch Paper is heavy Gator-Hide Kraft Paper impregnated with asphalt. It is black in color, very tough and is used on the soil surface. Seeds may be planted or plants set in holes punched in the paper or paper laid between the rows. It has worked miracles in increased, earlier yields; it is essentially an agent for increasing soil warmth, eliminating cultivation, weeding and retaining soil moisture.

Mulch Paper comes in rolls, 18 and 36 inches wide.

It comes in two weights of paper. The light weight is for one season use, easy handling among flowers and in home gardens, but of course may be used on any scale of planting. The light weight comes 800 lineal yards to the roll. The heavy weight is double thickness, stands rough use, should last much longer and comes 150 lineal yards to the roll. It is by far the best.

MULCH PAPER PRICES—Light or Heavy Weight. Not Prepaid—18-inch Roll, 30 lbs. \$3.00; 36-inch Roll, 60 lbs. \$6.00.

TRIAL PACKAGE—About 15 yds., heavy weight, 85c, postpaid.

WYATT'S BLOOD TESTED BABY CHICKS

100% LIVE DELIVERY GUARANTEED---POSTPAID

You are guaranteed 100 per cent live delivery of chicks from us, so with a good brooder and house 500 or more may be purchased and cared for, fed and reared with much less expenditure of time and money than was required with one-half that number under the old method. You can get your chicks early and raise early pullets that will begin laying in the early fall and continue through the winter, when eggs are high. Your broilers may be sold on an early market when the price is always high.

HOW TO ORDER

To avoid any delay, use the order blank. Orders are filled in turn, so book your's in advance, if possible. State second and third choice if you can use other breeds.

Straight orders of one kind are best. Do not order too many different kinds at one time. We do not always have chicks of every breed hatching and this may delay your order. Do not wait until a week before you are ready for the chicks and expect to receive them by return mail, for the wise poultryman has placed his order weeks in advance and is likely to be getting them the same day you want them.

TERMS

Our terms are cash with order. We will book orders with a 25 per cent cash deposit, balance of remittance to be made when we notify you. No chicks are shipped O. O. D. Refusal to accept chicks or remit balance forfeits first payment. Remittance may be made as customer prefers, but all payments must be honored before shipment is made.

PLANET JR. TOOLS

You cannot afford to till the ground without Planet Jr. tools. They not only save hard labor, but enable you to cultivate double the acreage in the same time, and thus add over 100 per cent to your crop yield. Invented by a practical farmer and manufacturer—the result of fifty years's experience. Strong lasting construction. Fully guaranteed.

NO. 4—COMBINED HILL AND DRILL SEEDER AND SINGLE WHEEL HOE

The small grower should select one of the combined machines. The drill attachment will not be used as often as the hoeing and cultivating tools, but will be a source of much saving. This machine is a special favorite. There are probably more of them in use in the world than any other seeder made. As a Hill and Drill Seeder it opens the furrow, deposits the seed, covers it and rolls it, either in drills or hills. Holds 2½ quarts. Price, \$16.75.

No. 4 Planet Jr. Combined Hill and Drill Seeder and Single Wheel Hoe

NO. 9—PLANET JR. HORSE HOE AND CULTIVATOR

Weight 70 lbs.
Price, \$12.75

These Planet Jr. Horse Hoes and Cultivators are stronger, better made and finished than any other one-horse cultivators, and enable you to increase your yield, because they do a greater variety of work in corn, potatoes, cotton, beans, tobacco and other crops requiring similar cultivation, and do it more thoroughly. Cultivate deep or shallow, in different width rows, and the extra long frames make them steady running. All Planet Jr. cultivator steels are made of beveled steel, thickest down the center, making them self-sharpening, and the points retain their shape and strength. No. 9 has lever expander, allowing quick adjustment for different width rows. Used with or without a wheel.

NO. 9-D. Without wheel. Price, \$11.00.

NO. 12—DOUBLE AND SINGLE WHEEL HOE COMBINED

No. 12 Planet Jr. Double Wheel Hoe

The arch is high enough to straddle a row until plants are 20 inches high; this insures close work. It can be altered into an admirable single wheel hoe for working between rows. Price, \$10.25.

You can use it in very narrow rows—as close as 9 inches. You can use it in 42 to 48-inch rows by closing off the flow in three spouts and distributing through the other three—either on the right or left hand side.

Price \$26.00
